DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 17-23, drawn to a method for controlling a transmit spectrum in medical imaging, classified in class 600, subclass 407.
- II. Claims 11-16 and 24-27, drawn to a transducer array with associated drive means, classified in class 310, subclass 334.

The inventions are distinct, each from the other because of the following reasons:

Inventions of the two groups are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case transducer arrays have applications in drilling, sensing, etc.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2834

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Direct inquiry to Examiner Dougherty at (571) 272-2022.
